MISSOURI BOTANICAL GARDEN n

Her? Mor Oct. 27, 1874, Dr. Geo. Engelmann. S. Louis, Mo. My Dean Doctor; -I was wh on the Lina Nevada, a week or two ago, and got a couple of firstly the Gentions and another couple of Callitriches for you. In will find them in the little parcel which I mail herewith, also at number of other plants which you can perhaps you me the names of. The numbers and thou ahreh my Californian plants will hear as distributed. On Gray tells me he has sent you africiones of the minte gellow-flowered gentian which I sent him. which apprais to be get undescribed, as Imper from Dr. Jray.

About the Callitrishes - No 445 was the exclusive tenant of a little sink or poul of clear Maynant water in a swampy meadow. 446. after the same manner exchisively occupied a frud of about the same size, not more then ten fut from the other. The I thought very interesting, because the plants are appointly of two quite distinct species, the latter having its duburessed leaves ovate, on off three newed, and the former having them all linear. The Cusentas Itmest I have nightly Oaks - The one I told you about with droofing branches is plainly L. lobata, Dei, according to the pyrine in Bot Wilhe's Ex. - my No. 367. This is what I described to you as a white oak with drooping branches, Those shorts of this years growth are on some trees four and fin fect long!

Good old tous with tounks desilute y branches for twenty and thirty feet, get have their branches sweething the ground, and I han sun jungen trus which, as to from of head, had just the appearance of weeking willows. No. 942. is a closely achied spechies onyly; possibly a variety only, a smaller true, Us new shoots are erect on honzented. not pendulous, and so long-I send you the first length of them. The true has nothing of the drooping No. 421 in its comment- from is a neat little bush of the Surray having the aspect of a vaccinium. I suppose it is Lucrous Vacciniafolia, Hork. het han no mans of identifying d'. The trip & Lake County shine so many bushy forms grow, is expension, and I decided to wait and go twice next year getting flowers fint: marking the bushes, and then getting fruiting

ehned be made I think in early October.

In the region when there your I got four new spicies of plants, a Senecio

A Collinsia, an Aceralis, and a

Brodiaa. May be then for some y the oaks will be new to you, if

enn get thum, But I will sinely grin that section a more through

Joing over next year's had a splendid time into Colorado, Jun an j course home

again of this time, I you can you me names for the mundetsmined oaks and Cathetriches

Gentians & C. Ishael h greatly obliged. As Ever yours & L. Greene.

V.S. Juneuro 369 - I find nothing like it in my set of the Herb, Normale. In will find my photograph in the puckage Hym can spare me ou grownelf, please fut it in your next attent toblige,

Her July 114 Columbus O. June 9 1. 76. Ste G. Engelmann Stavuis. My dear Sir. 7055il Oak S. Sam obliged ti gou for sending your pamphlets to Saporta Hyon write him please Write in french as he as he does not read laylish landy. - Salling the section of the Stack Valhe at you fin it in your memor B melani. -balanus, a good many spewer of testicy baths described by Suronean authors are referable t it. As limited by Gray for G. Hirifolie, folcate Coursea Bubia Apalentres, fent species appear referable to it; one however of. angustileba al. Br. is in durone livre miècene and found here i' the love louve, dore above the Cretaceon, Nobody can how better than yourself howhazar--deresit is to rely on definition of outh species from muse lane, and from the 160 species described as get from the Crelaceon and the Testian two only an thown by the fruits. The oldest ty Tu is that of the that not outly represented in the Cretaceous. From the leving species eight have been
